

How Secure Is Your Network And Data?

Why not let us give your Network a full Phase One Security Audit

This service tests and audits the key elements essential to a secure Network.

The audit and survey will look in depth at the overall network vulnerability and address in detail:

- Internal Threats and Vulnerabilities
- External Network Vulnerability and penetration testing
- Vulnerability research
- Firewall / Router testing
- Intrusion detection system testing.
- Denial of service testing.

" Eurotek's Network Security services and ongoing Vulnerability scanning and reporting have ensured that we keep on top of threats and maintain Data and I.T. integrity"

**DARREN SMITH : IT OPERATIONS
THE ROYAL INSTITUTION OF CHARTERED
SURVEYORS**

Results will be summarised in a full report highlighting areas of concern, outlining any recommended solutions to problems and recommend changes that will improve the

All tests carried out are performed in accordance to the Open Source Security Testing Methodology and are compliant with both IS 17799-2000 (BS7799) and the UK Data Protection Act 1998.
